Pseudocode for CISC 121 Assignment

2. Odd Occurences In Array

For each number in A:
    count how many times that number appears in A

    If the count is odd:
        Return number.

4. PermMissingElem

for number in range(1, len(A) + 2):
    if number not in A:
        return number

5. TapeEquilibrium

best = difference for the split after the first element.

For split from 1 through (length(A) - 1):
    left = sum of elements before split
    right = sum of elements from split onwards
    difference = absolute value of (left - right)

    If difference < best:
        best = difference

Return best

6. Perm Check

```
For number from 1 through length(A):
    If number is not in A:
        Return 0
Return 1
```

7. Frog River One

```
Positions = an empty list

For time from 0 through length(A) - 1:
    Position = A[time]

    If Position is not in Positions:
        add Position to Positions

    If length(Positions) = X:
        Return time

Return -1
```
